

## **The Power of HODL**

CardanoMini is a community created project by the enthusiasts who love \$ADA. The CardanoMini team believes holders should be rewarded, as much as a token should have utility. Our vision is that we want to take ourselves out of the binance chain majority and be able to guarantee a standard passive income for our investors.

As a DeFi token on the Binance Smart Chain (BSC), the \$ADAMini team believes that holding a token should be beneficial, during market up and down trends. Let us explain:

### **1. Hold To Earn**

Hold \$ADAMini to earn \$ADA on BSC. Every transaction on the contract has a tax of which a percentage is converted to \$ADA and distributed to holders. A tax of 15% is divided as follows:

### **2. Our Partner Projects**

On to our utility for our token. We believe that to survive and build better products in the long term, our token has to have a reason to be bought, aside from just the rewards. We will be having early access to our partner projects such as \$MotherDOGE where holders of ADAMini will benefit. Our current specification to participate in early access are:

- Holders must have 2M \$ADAMini.
- Holders who qualify can only buy 50% of the max wallet limit.
- Holders who qualify only have 30 minutes before trading starts for fair launches.
- Holders get access to presale whitelists.

Details to these projects and eligibility will be available in our upcoming DApp dashboard. Our partner projects will be advised on contract security and issues. Partner projects that launch with us MUST:

- ~~● Buy and burn \$2000 USD worth of \$ADAMini tokens. It can be done in batches.~~
- ~~● Allow the \$ADAMini team to farm through a 1% wallet.~~
- Must have a contract check by the ADAMini team.
- Will go through community voting, but passing it is not a requirement.
- Must whitelist our holders for presale or give our early access holders a call before a fair launch first before the public.
- Must give ADAMini a max wallet that can farm tokens which will be used to buy and burn ADAMini. This wallet will be locked and won't sell tokens of the project.

Requirements are subject to change in the future.

### **3. CardanoMini's Helping Hand**

Community charities. The team will be using funds from the marketing wallet for charities suggested by the community. These can be anywhere in the world. This will be a sign of good will as we would like to help out when and where we can.

### **4. Buy Back And Burns**

Every now and then, especially during market down trends, the team will buy back and burn tokens (which in turn sends \$ADA rewards to holders). This will ensure that the token becomes scarce with time. These will be random so users cannot take advantage of them. A proof of burn will be shared on our socials.

## **5. Supercharged Rewards Days**

We will be having supercharged rewards days on the days that have low volume where we will be updating the rewards reflection to more than 10% and reducing the marketing wallet reflections. These will be random and dropped anytime so our investors will always have passive income.

## **6. Miscellaneous (Merch, NFT, and more)**

We will have merch and NFT launches with different milestones that we hit, for example we have already prepared an exclusive NFT for when we reach 10M market cap which will have a limit number.

Funds from this will be used for marketing and buy back burns.

### **What is DeFi?**

The straightforward definition of DeFi is Decentralized Finance. Unlike CeFi, which (yes, you guessed it) stands for Centralized Finance, DeFi is an industry focused on financial services on a blockchain. DeFi makes these systems become faster, cheaper, and globally accessible. By taking out the middleman, there is no one who holds power over your transactions besides the sender and receiver.

The question to ask yourself is 'who has the power over money?' By decentralizing power over money, we give people the opportunity to create better and more trusting relationships with their money. Our goal is to increase access to financial services and disintermediate all the gatekeepers who currently prevent and limit access to funds and financial services. We want you to be the boss.

### **Why Binance Smart Chain and any plans for other chains?**

At the moment Ethereum GAS fees are rather high, preventing investors from buying and selling their tokens in a proper way. We believe everybody deserves a fair chance to make an investment, even if their funds are low. With ultra fast and low cost transactions, the Binance Smart Chain is the perfect solution to this problem.

We are also going to look into the Cardano smart contracts once the mainnet is out but we cannot promise that we will launch anything there yet.

## **Tokenomics**

Total number of tokens generated by the contract are 1,000,000,000. Out of these the team has allocated as below as this is a fair launched project as launch.

### **90%**

900,000,000 of the tokens were added to liquidity and they are locked for 6 months on mudra.

### **5%**

50,000,000 of the tokens have been allocated to our marketing wallet. This wallet contains funds used for marketing and development.

### **5%**

50,000,000 of the tokens have been burnt by our dev to the burn address.

## **Security and Safety**

We believe it to be trivial for investors to know that their funds are safe with us. We have taken every necessary precaution we could in order for you to feel reassured.

We were backed and approved by YOLO Finance, (<https://youonlyliveonce.finance/> ) which you can see on their spreadsheet, but unfortunately we had disagreements with them. We will do another audit in due time.

Apart from that, we have locked the initial liquidity for 6 months and new LP tokens that our contract generates are automatically burned. This is for people to know that their funds aren't simply going to be removed.

## **Anti Snipes and Other Fun Facts**

The most important thing for people to know is that our community is our most valuable asset. They are the individuals who are able to create a network effect and spread the CARDANOMINI name out there. We have launched with a fair launch, we have deployed the contract days before the launch and added liquidity in pancake swap hours before enabling the trading. All of these precautions were taken in order to avoid sniper bots from sabotaging our project.

Another few fun facts about ADA Mini is it's anti-whale features. For that it prevents any transactions above 0.25% (currently) of the total supply and prohibits holders from having more than 3% in their wallets. (Whale protection)

Last fun fact about ADA Mini, as our reflections are so high, many holders prefer to actually just keep their ADAMini forever to earn more ADA. We have also renounced the contract ownership to make sure funds are SAFU!

That being said this is not financial advice, and as always you should DYOR.

## **Roadmap**

Q3:

- Project Launch.

- Listing on Platforms such as Coingecko, Coinmarketcap, Livecoinwatch, nomics.com etc.
- Website rework, with roadmap, whitepaper, utility and rewards calculator.
- Launch at least one partner project.
- Start our DApp

Q4:

- Our DApp is integrated into the website which gives holders access to partner projects.
- Actual use case that brings in investors to buy \$ADAMini
- Community charities.
- Onboard partner projects.
- Launch at least 3 partner projects.

2022:

- More utility will be planned for the token.
- CardanoMini becomes the go to token for passive income on BSC.
- More partnerships.

For any questions or concerns feel free to reach out on our telegram community where our admins and mods are very active and supportive.
